CSA 15- CLOUD COMPUTING AND BIG DATA ANALYTICS
LIST OF EXPERIMENTS 14

14. Demonstrate Infrastructure as a Service (IaaS) by creating a Virtual Machine using a Public Cloud Service Provider (Azure), configure with required memory and CPU.

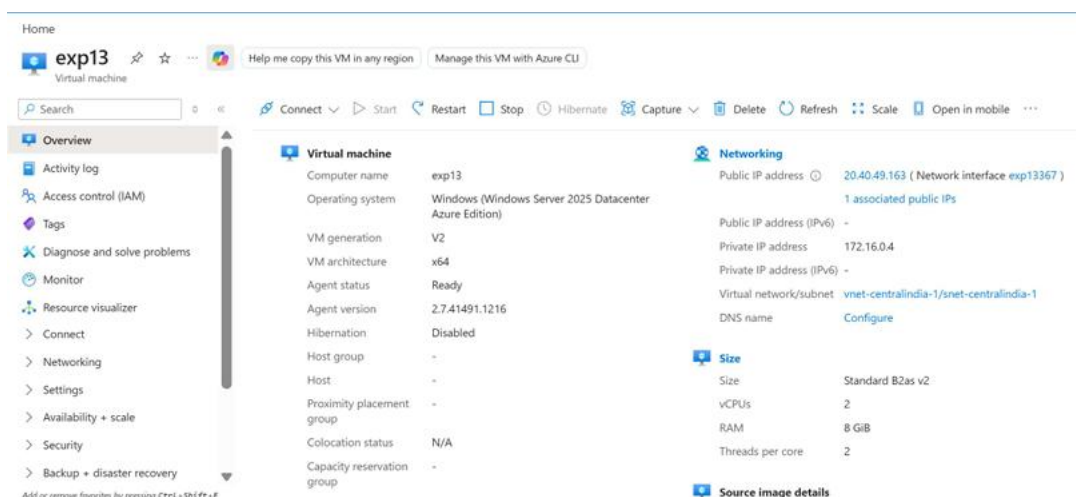

Aim:

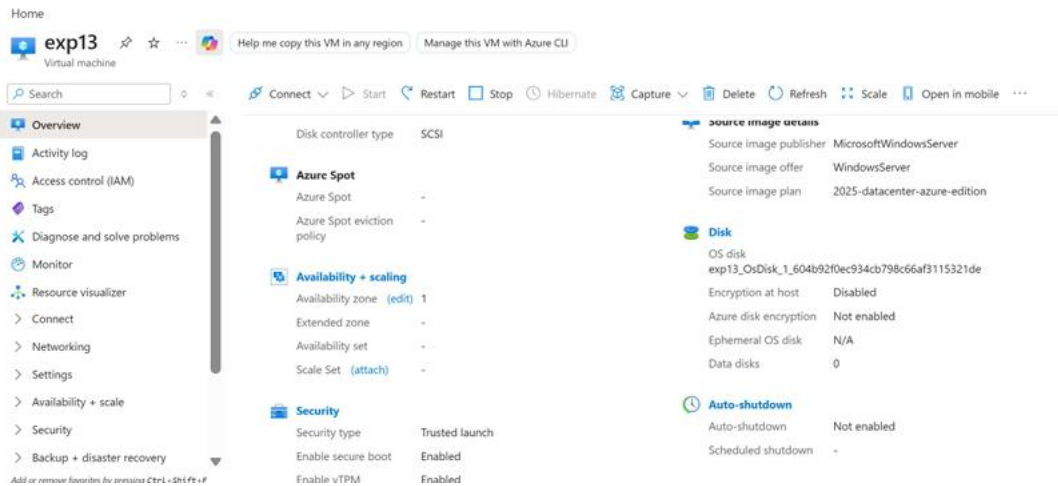

To demonstrate Infrastructure as a Service (IaaS) by creating and configuring a Virtual Machine in Microsoft Azure with required CPU and memory.

Procedure:

1. Sign in to the Microsoft Azure Portal.
2. Select Virtual Machines → Create → Azure Virtual Machine.
3. Select the required Resource Group and OS image.
4. Configure the required CPU and RAM.
5. Set the username, password, and network settings.
6. Review the configuration and click Create.
7. Wait for the VM deployment to complete.
8. Verify that the VM is running successfully.

Snapchat:

Result:

Thus, a Virtual Machine was successfully created in Azure with the required CPU and memory, demonstrating IaaS.
