CSA 15- CLOUD COMPUTING AND BIG DATA ANALYTICS
LIST OF EXPERIMENT 25

25. Install a C compiler in the virtual machine created using virtual box/ VMWare Workstation / Player and execute Simple C Programs.

Aim:

To install a C compiler in a virtual machine created using VirtualBox/VMware and execute simple C programs.

Procedure:

1. Start the VM using VirtualBox / VMware Workstation.
2. Install a C compiler such as GCC.
3. Open the Terminal/Command Prompt.
4. Create a simple C program, e.g., Hello World.
5. Compile the program using the GCC compiler.
6. Execute the compiled program.
7. Verify the output.

Screenshot:

The screenshot shows a terminal window titled 'sami@sami: ~' with a menu bar (Session, Actions, Edit, View, Help). The terminal output is as follows:

```
1053 packages can be upgraded. Run 'apt list --upgradable' to see them.
(sami@sami)-[~]
$ sudo apt install gcc
gcc is already the newest version (4:15.2.0-5).
gcc set to manually installed.
The following package was automatically installed and is no longer required:
  libc6-dev
Use 'sudo apt autoremove' to remove it.
Summary:
  Upgrading: 0, Installing: 0, Removing: 0, Not Upgrading: 1053
(sami@sami)-[~]
$
(sami@sami)-[~]
$ nano hello.c
(sami@sami)-[~]
$ gcc hello.c -o hello
(sami@sami)-[~]
$ ./hello
Hello world
(sami@sami)-[~]
$
```

A 'Screenshot taken' notification is visible in the top right corner of the terminal window.

Result:

Thus, the C compiler was successfully installed in the virtual machine, and simple C programs were compiled and executed successfully.
